September 2013

To Whom It May Concern:

According to the State of Michigan Daycare Licensing rules R400.5205a (2)(C), the handling and storage of breast milk requires written permission to warm breast milk.

The Physicians of Lansing Pediatric Associates grant the permission to warm breast milk.

- Warming the breast milk will not change the nutritional content of the breast milk and the parent is aware of the potential for bacteria growth if the breast milk is warmed.
- This permission is granted for the duration of which the infant is on breast milk.
- Breast milk should not be warmed in a microwave

Any further questions of concerns, please contact our office.
